

# THE CARBON CYCLE GAME

Students play the role of carbon atoms traveling through the carbon cycle to gain understanding of the the varied pathways through the cycle and the relevance of carbon to living and non-living things..

## Related Web Pages for Students

- <http://eo.ucar.edu/kids/green/cycles6.htm>
- [http://www.windows2universe.org/earth/Water/co2\\_cycle.html](http://www.windows2universe.org/earth/Water/co2_cycle.html)
- <http://www.physicalgeography.net/fundamentals/9r.html>

## Student Learning Objectives

- Students will learn that carbon cycles indefinitely through the Earth system and where it is found.
- Students will learn that carbon is integral to Earth's various spheres and that it is exchanged and cycles among them.
- Students will learn that all living things are made of carbon and that it is also a part of the ocean, air, rocks and more.

## Time

- One or more class periods

## Materials

- Copies of game posters on 8.5"x11" sheets of paper
- Copies of game tickets placed at the appropriate center
- Passport, one per student
- Stickers, stamps, or other passport markers
- 1 pencil per student

## National Standards

5-8 Content Standard D: Structure of the Earth System  
5-8 Content Standard C: Populations and Ecosystems  
9-12 Content Standard C: Interdependence of Organisms  
9-12 Content Standard D: Geochemical Cycles

## Preparation

1. Post the larger poster signs provided representing various carbon sources and sinks at various stations around the room.
2. Print passport tickets for each carbon source and sink and place them with their corresponding station. The initials at the bottom of each ticket represent the initials of the center to which they belong.
3. Place a unique stamp or sticker at each center with which students will mark their passports when visiting the center.
4. Copy the passport worksheets, one for each student.

## Activity

1. Determine what students know and don't know about carbon and the carbon cycle. Discuss the carbon cycle as a class and explain carbon sources and sinks.
2. Place the various carbon stations and each station's tickets in various locations about the room (a larger room is best). Explain that these are places where carbon can be found within the carbon cycle.
3. Tell the students that they each will be playing the role of a carbon atom. They will be given a passport and start at one of the stations, draw a ticket, and cycle to new places placed on the information on the ticket drawn. They will record the various stations they visit by marketing their travels on their individual passport. Students should write a note on the passport to explain how they went from one station to the next (i.e. decomposition, animal respiration...).
4. Spread the students out among the various stations and have them begin their travels.
5. Discuss these questions and more with your students following the activity:
  - In the real world, does the cycling of carbon stop?
  - Was everyone's journey the same? Why or why not?
  - What might cause an increase or decrease of carbon dioxide in a given location such as in the atmosphere or buried under ground.
  - Carbon dioxide is often referred to as a greenhouse gas. What does that term mean?
  - Where do you think most of the carbon is located on our planet? Look for evidence online to support your opinion.

*Related Background Information on the Carbon Cycle and biogeo-chemical cycles in general can be found at the website at the top of the page.*

### Travel the Forest Ecosystem with your Carbon Passport!

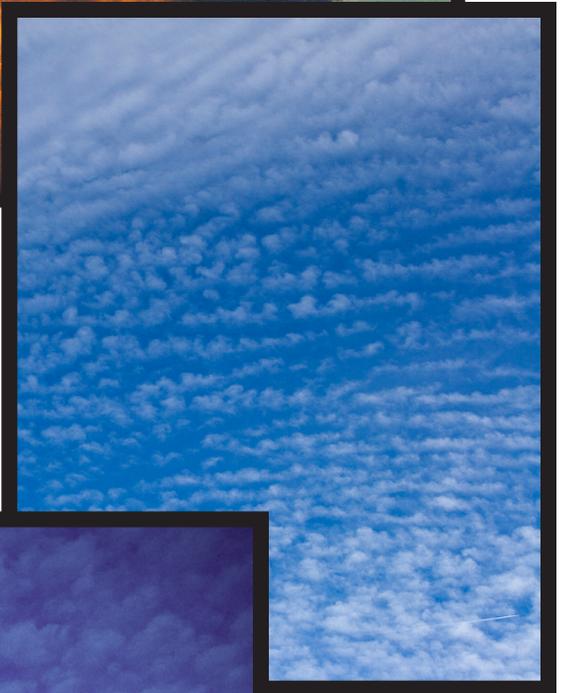

1. Fill out your start location in the space below.
2. Choose from the grab bag at your start location to find out where to go next. Write the "Where I'm going" and "How I'm getting there" information in the Trip #1 box.
3. Head to that location and choose from the grab bag to find out where to go next.

**Start Location:** \_\_\_\_\_

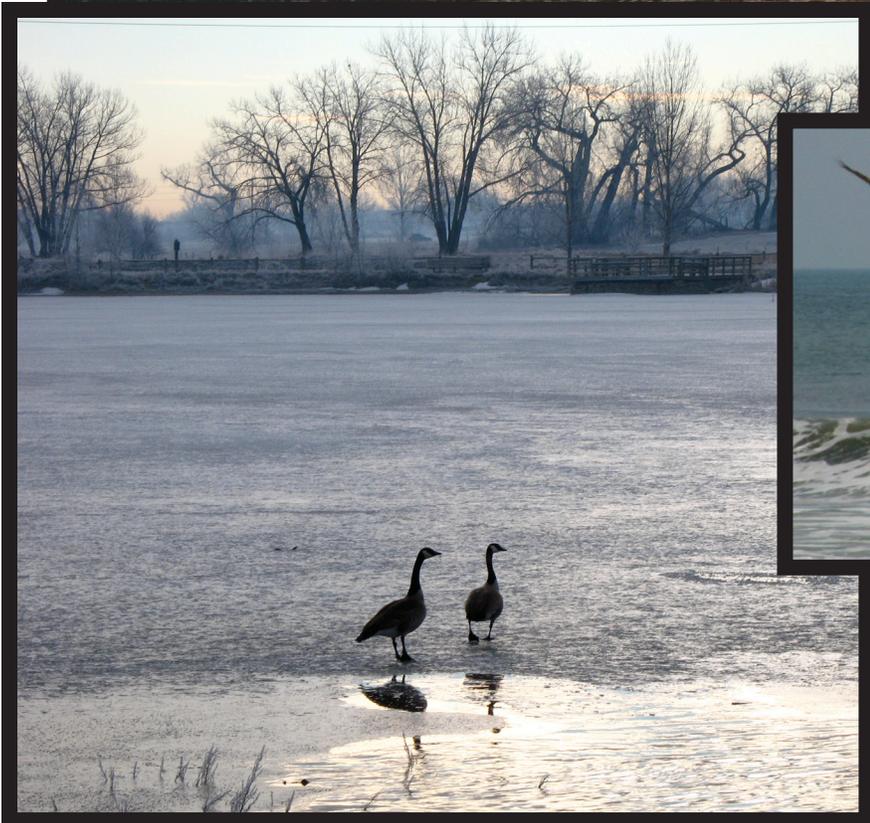

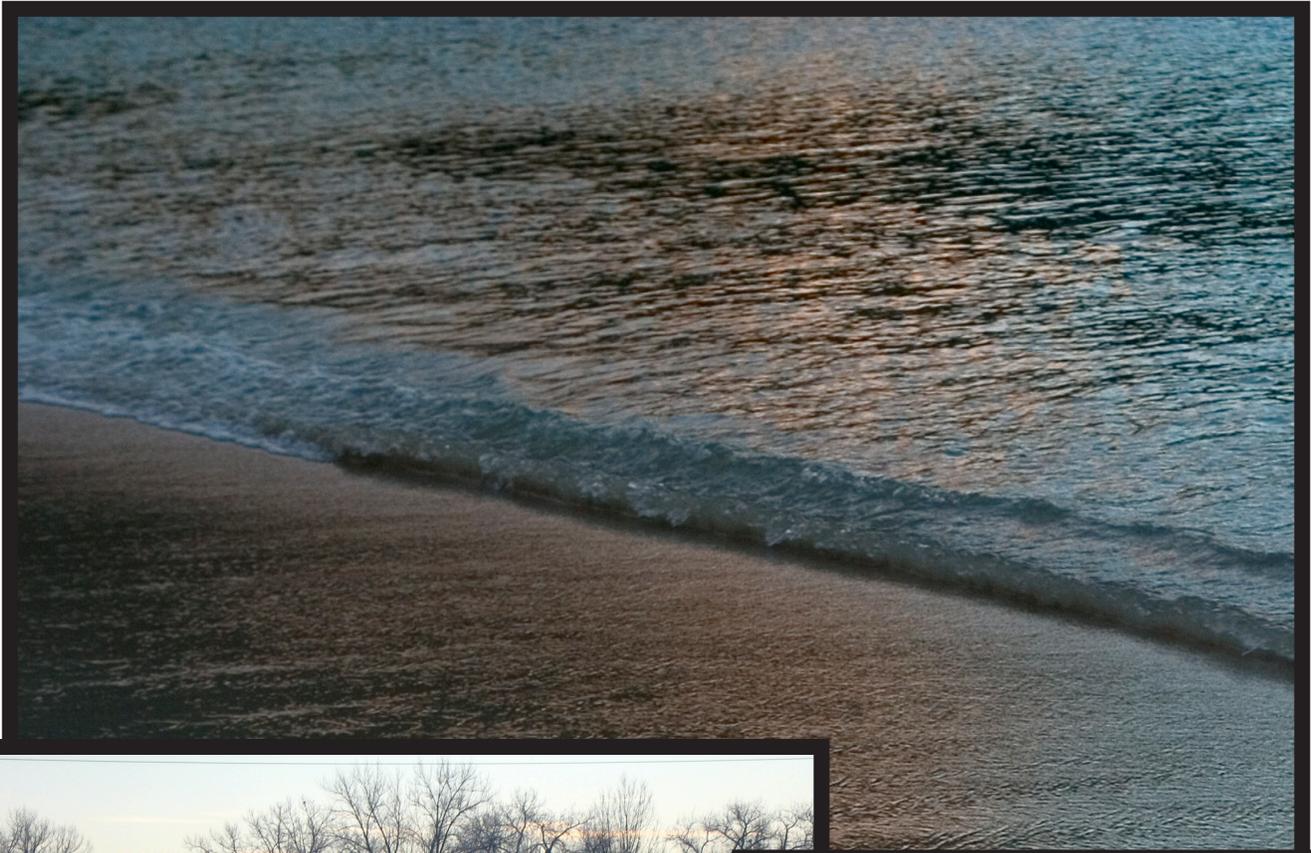

Trip 1: Where I'm going: _____ How I'm getting there: _____	Trip 6: Where I'm going: _____ How I'm getting there: _____
Trip 2: Where I'm going: _____ How I'm getting there: _____	Trip 7: Where I'm going: _____ How I'm getting there: _____
Trip 3: Where I'm going: _____ How I'm getting there: _____	Trip 8: Where I'm going: _____ How I'm getting there: _____
Trip 4: Where I'm going: _____ How I'm getting there: _____	Trip 9: Where I'm going: _____ How I'm getting there: _____
Trip 5: Where I'm going: _____ How I'm getting there: _____	Trip 10: Where I'm going: _____ How I'm getting there: _____

# Atmosphere

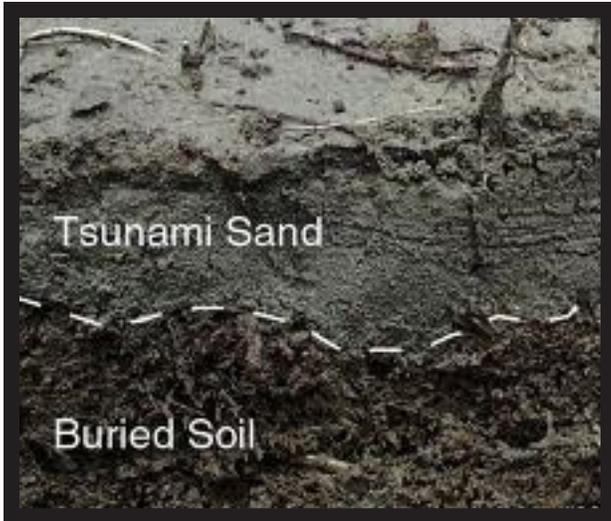

# Surface Water

# Animal Waste

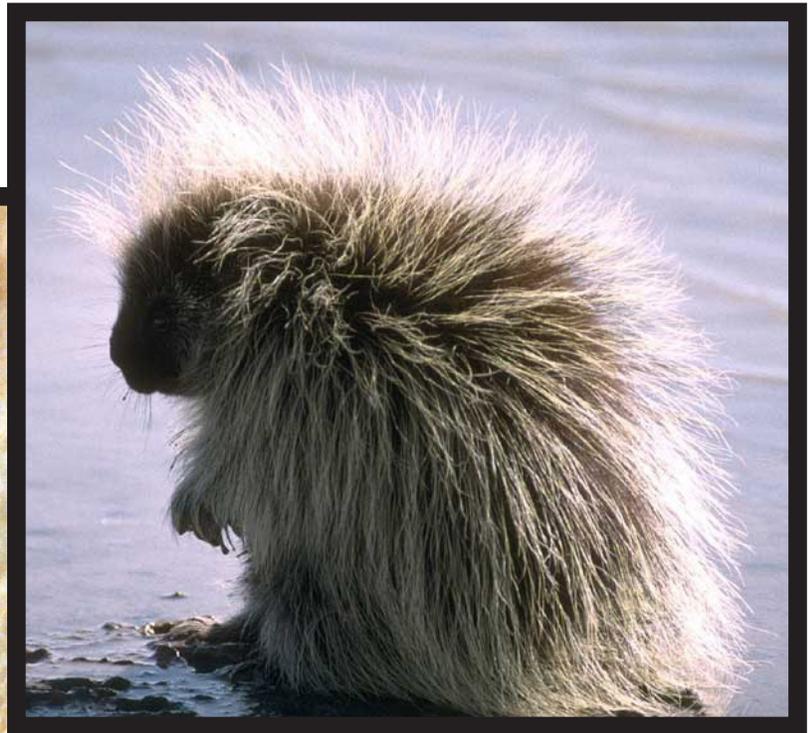

# Soils

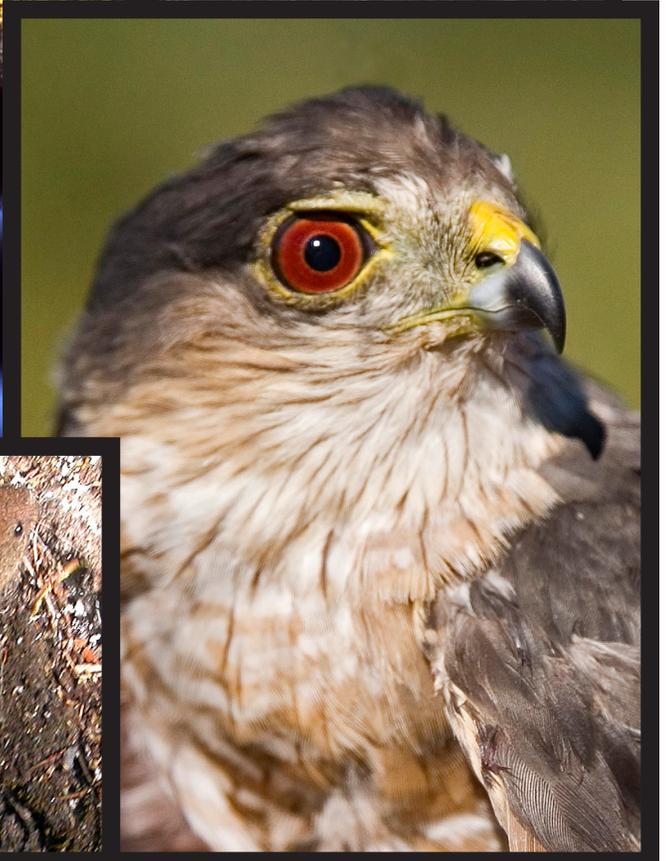

# Live Animals Herbivores

mountain pine beetle,  
porcupine, mule deer

# Live Animals Carnivores

downy woodpecker,  
pine martin,  
sharp-shinned hawk,  
southern red-backed vole

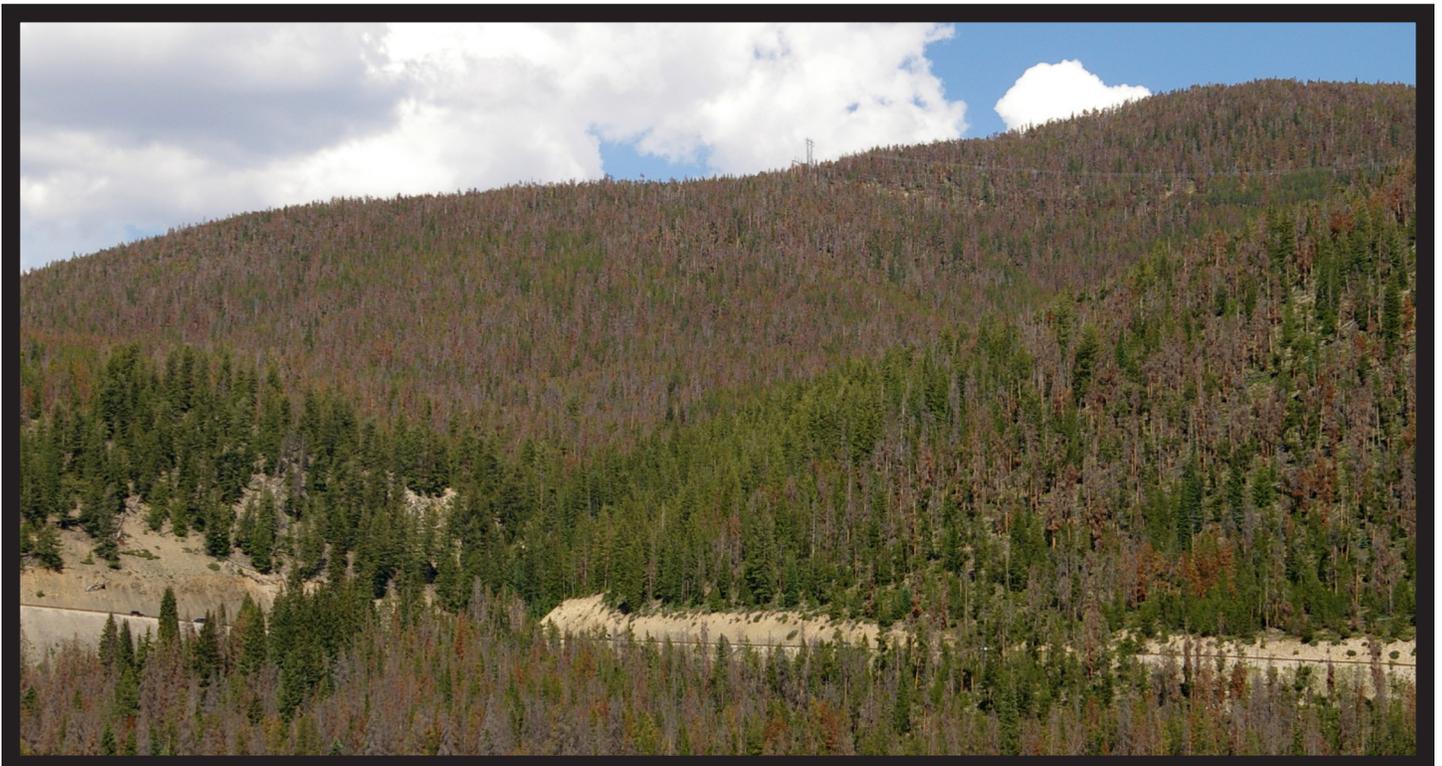

# Live Plants

lodgepole pine,  
dwarf mistletoe

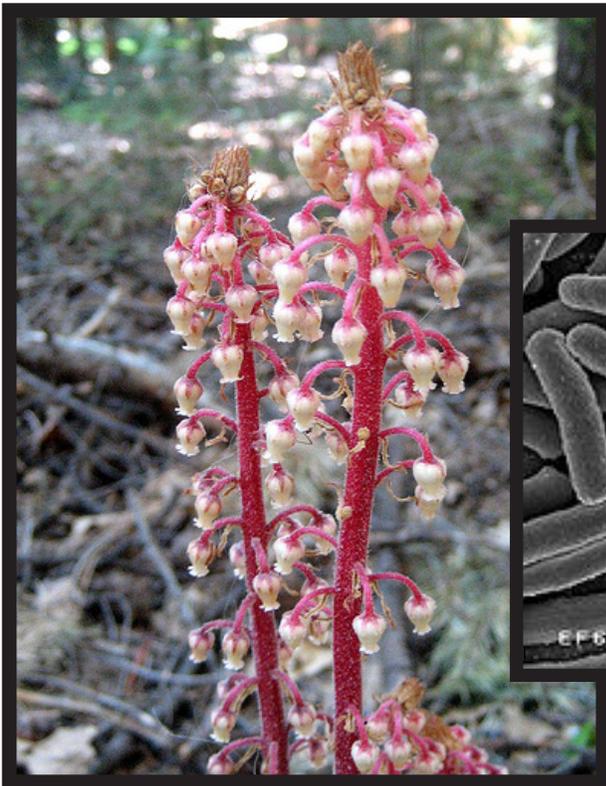

# Dead Plants and Animals

# Decomposers & Parasites

Honey Mushroom (right)  
Pine Drops (below)  
Soil Microbes (middle)

# **Carbon Cycle Game**

# **TICKETS**

**You are in a dwarf mistletoe plant eaten by a chipmunk.  
[ingestion]**

**Go to LIVE ANIMAL HERBIVORES**

**LP**

**Wildfire has burned the living tree you are in.  
[combustion]**

**Go to the ATMOSPHERE.**

**LP**

**You are in a pine tree parasitized by a dwarf mistletoe  
plant.**

**Stay in LIVE PLANTS and draw another ticket.**

**LP**

**You are in a seed eaten by a white-breasted nuthatch.  
[ingestion]**

**Go to LIVE ANIMAL HERBIVORES.**

**LP**

**You are in a leaf eaten by a mule deer.  
[ingestion]**

**Go to LIVE ANIMAL HERBIVORES.**

**LP**

**You are in a pine seed eaten by a chickaree squirrel.  
[ingestion]**

**Go to LIVE ANIMAL HERBIVORES.**

**LP**

**You move from a pine tree needle to the heartwood where you stay for 80 years.**

**Stay in LIVING PLANTS**

**Count to 80 before drawing a new ticket.**

**LP**

**You move from a pine tree needle to the bark where you stay for 25 years.**

**Stay in LIVING PLANTS.**

**Count to 25 before drawing a new ticket.**

**LP**

**During the night, you are released into the air as your pine tree carries on respiration.  
[respiration]**

**Go to the ATMOSPHERE.**

**LP**

**You are in the pine tree's bark eaten by a porcupine.  
[ingestion]**

**Go to LIVE ANIMAL HERBIVORES**

**LP**

**The tree you are in crashes to the forest floor a year after a pine beetle attack.  
[death]**

**Go to DEAD PLANTS AND ANIMALS**

**LP**

**You have been taken out of the air by a dwarf mistletoe plant on a sunny day.  
[photosynthesis]**

**Go to LIVE PLANTS**

**A**

**As a part of a greenhouse gas molecule, CO<sub>2</sub>, the length of your stay in the atmosphere can be variable.**

**Stay in the ATMOSPHERE.**

**You will be here for 10 years, so count to 10 before drawing a new ticket.**

**A**

**As a part of a greenhouse gas molecule, CO<sub>2</sub>, the length of your stay in the atmosphere can be variable.**

**Stay in the ATMOSPHERE.**

**You will be here for 25 years, so count to 25 before drawing a new ticket.**

**A**

**As a part of a greenhouse gas molecule, CO<sub>2</sub>, the length of your stay in the atmosphere can be variable.**

**Stay in the ATMOSPHERE.**

**You will be here for 100 years, so count to 100 before drawing a new ticket.**

**A**

**A lodgepole pine tree in the sunshine has removed you from the air to make a sugar molecule.  
[photosynthesis]**

**Go to LIVE PLANTS**

**A**

**You have moved from the air into a lake, becoming carbonic acid. [diffusion]**

**Go to SURFACE WATER**

**A**

**You are absorbed by a raindrop as it falls into a stream.  
[diffusion]**

**Go to SURFACE WATER**

**A**

**You are dissolved in a raindrop which is falling into a pond.  
[diffusion]**

**Go to SURFACE WATER**

**A**

**You are swept into the air by a breeze passing over a lake.  
[diffusion]**

**Go to the ATMOSPHERE**

**SW**

**You move into the air that is drifting over a stream on a hot day. [diffusion]**

**Go to the ATMOSPHERE**

**SW**

**You are floating near the surface of a puddle as you are swept into the air.  
[diffusion]**

**Go to the ATMOSPHERE.**

**SW**

**You are in a puddle at the base of a soggy stump being consumed by a fungus.  
[decomposition]**

**Go to DECOMPOSERS**

**SW**

**You are in a deer dropping which is consumed by a honey mushroom.  
[decomposition]**

**Go to DECOMPOSERS**

**AW**

**You are in a bear poop consumed by a pinedrop plant.  
[decomposition]**

**Go to DECOMPOSERS**

**AW**

**You are released into the air by a honey dew mushroom.  
[decomposition]**

**Go to the ATMOSPHERE.**

**D**

**You are sent into the air at night in a CO<sub>2</sub> molecule as a coral plant respires.  
[respiration]**

**Go to the ATMOSPHERE**

**D**

**You are in a honey mushroom eaten by a black bear.  
[ingestion]**

**Go to LIVE ANIMAL HERBIVORES**

**D**

**You are in a honey dew mushroom covered by dew drops that are moving into a puddle.  
[decomposition]**

**Go to SURFACE WATERS**

**D**

**You are in a chipmunk eaten by a sharp-shinned hawk.  
[ingestion]**

**Go to LIVE ANIMAL CARNIVORES**

**LAH**

**You are in the muscle tissue of a chickaree squirrel which  
is eaten by a pine marten.  
[ingestion]**

**Go to LIVE ANIMAL CARNIVORES**

**LAH**

**The chipmunk you are within has just died from a viral  
infection.  
[death]**

**Go to DEAD PLANTS AND ANIMALS**

**LAH**

**You are released by a urinating mule deer.  
[excretion]**

**Go to ANIMAL WASTE**

**LAH**

**You are in a pine beetle eaten by a woodpecker.  
[ingestion]**

**Go to LIVE ANIMAL CARNIVORES**

**LAH**

**You are in a bird dropping released as a chickadee  
flutters by.  
[excretion]**

**Go to ANIMAL WASTE**

**LAH**

**You are in a beetle eaten by a southern red-backed vole.  
[ingestion]**

**Go to LIVE ANIMAL CARNIVORES.**

**LAC**

**You are released as CO<sub>2</sub> into the air from the lungs of a  
red-backed vole.  
[respiration]**

**Go to the ATMOSPHERE**

**LAC**

**You are swept away by stream water flowing past a  
feeding honey dew mushroom.  
[decomposition]**

**Go to SURFACE WATER**

**LAC**

**The sharp shinned hawk you are within has died of old  
age.  
[death]**

**Go to DEAD PLANTS AND ANIMALS**

**LAC**

**You are released as a CO<sub>2</sub> molecule by a growling black  
bear.  
[respiration]**

**Go to the ATMOSPHERE**

**LAC**

**You are in a fat cell inside a downy woodpecker eaten  
by a sharp-shinned hawk.  
[ingestion]**

**Stay with LIVE ANIMAL CARNIVORES and draw  
another ticket.**

**LAC**

**You are in a pine marten which is killed in a fall from a very tall tree.**

**[death]**

**Go to DEAD PLANTS AND ANIMALS**

**LAC**

**You have just been pooped out in a dropping by a soaring sharp-shinned hawk.**

**[excretion]**

**Go to ANIMAL WASTE**

**LAC**

**FIRE! The dead tree you are in is burned in a campfire.**

**[combustion]**

**Go to the ATMOSPHERE**

**DPA**

**You are in a dead pine needle decomposed by a spotted coralroot plant.**

**[decomposition]**

**Go to DECOMPOSERS**

**DPA**

**Fire! The dead tree you are in is chopped up and burned by a human to stay warm. [combustion]**

**Go to the ATMOSPHERE.**

**DPA**

**You are in a dead pinecone scale on the ground being decomposed by a pine drop plant.**

**[decomposition]**

**Go to DECOMPOSERS**

**DPA**

**You are in a dead pine seed eaten by a chickaree squirrel.  
[ingestion]**

**Go to LIVE ANIMAL HERBIVORES**

**DPA**

**You are in rotten wood in the forest soil consumed by  
bacteria.**

**[decomposition]**

**Go to DECOMPOSERS**

**DPA**

**You are taken up from buried dead wood consumed by a  
coral root plant.**

**[decomposition]**

**Go to DECOMPOSERS**

**DPA**

**You are mistakenly swallowed by a southern red-backed  
vole which is looking for insects in the soil.**

**[ingestion]**

**Go to LIVE ANIMAL CARNIVORES**

**S**

**You are taken in by a fungus feeding in the soil.  
[decomposition]**

**Go to DECOMPOSERS**

**S**

**You are released into the air by a coral root plant  
growing in rich soil.**

**[decomposition]**

**Go to the ATMOSPHERE**

**S**
